

Manifesto

If elected, I would aim to:

Tackling Overconsumption and Pollution

Many people are unaware of the effects of overconsumption, pollution, and single-use vapes on themselves and the environment. To address this, I would create posters and run social media campaigns to raise awareness.

Boosting Morale and Climate Awareness

Low morale and lack of awareness can hinder climate action. To combat this, I would organize competitions to boost morale and increase student engagement in climate initiatives.

Advocating for Sustainable Change

I would lobby senior government and college leaders to implement sustainable changes within the college and local community.

I think these aims will have a positive impact on the awareness of climate change because it will bring up how we should take more action to how we treat it all as singular problems and not realising how it is all connected but also feeding into each other; in addition to holding people in greater positions of power accountable for their actions. I have experience in Scouts and have developed the following skills leadership, resilience, communication, team building and critical thinking. I believe these skills make me an ideal candidate as these have further developed my social skills which will help me in taking on your ideas and bringing them up to the Student Union. Thank you for taking the time to read my manifesto.
